

Smart Home App Configuration Study

Study A — Task 1 Questionnaire

General Instructions

This is a simulated smart home app. You are **not** controlling real devices. You will read a short description of a smart home situation and then try to use the app as you normally would. There are no right or wrong answers.

Scenario Description

You are the main person managing your smart home.

A short-term guest will be staying in your home.

Your home has several smart devices, including a door lock, a smart fan, a Wi-Fi router, and so on.

Configuration Task

Please set things up so that the guest can use all of the devices in this home during their stay.

When you feel you are done, click "End task" on the left to finish.

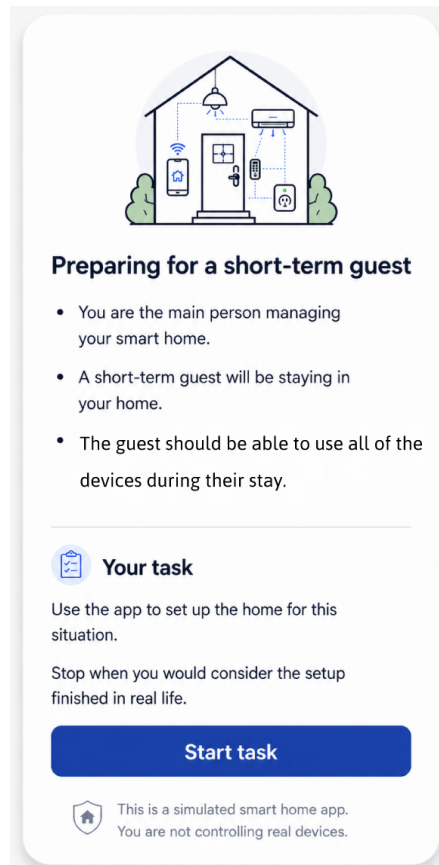

Figure 1: Prototype interface for Task 1.

Post-Task Question

1. Please describe how you decided what to do in the app.

[Open-ended response]

Thank you for your participation. Your responses will be kept confidential and used solely for research purposes.
